PROFESSIONAL SUMMARY

Results-driven product designer with 6+ years of experience transforming ambitious product visions into market ready enterprise and consumer focused SaaS solutions. Proven track record of leading end-to-end design processes and taking product visions from idea to launch contributing to measurable business growth. Recently moved Strategyzer's design process into code using AI, surfacing edge cases earlier, strengthening collaboration with engineering and helping the team ship value to customers twice as fast.

PROFESSIONAL EXPERIENCE

Senior Product Designer

Oct. 2025 - Present

Strategyzer

Remote

Strategy and innovation software for enterprise teams. The only designer on a product team of four.

- Pushed back on a chatbot and built what customers needed. We won back 18% of our churned customers within 30 days.
- Made the product team twice as fast. Rebuilt our design system in Claude, so ideas are tested as working software, directions are agreed on in hours and final iterations are shipped directly to production.
- Led org-wide AI adoption. Built the AI design system infrastructure for sales, marketing and client delivery. Deck creation time went from a full day to 30 minutes and increased the sales pipeline.
- Removed the bottleneck behind six-figure enterprise programs. Updates to a live program took two days to make and only two people knew how to. I redesigned it into a 30 minute change anyone could do themselves.

Senior Product Designer

Jan. 2023 - Sept. 2025

Fount

Remote

Enterprise SaaS that turns employee feedback into decisions. The only designer, leading two products end to end.

- Took Fount from idea to launch as the only designer. It replaced yearly employee surveys with short pulse surveys and dashboards that showed HR which parts of the employee experience to fix first. Fount made \$3M+ in its first year and weekly participation averaged 81%.
- Led prioritization for the first release with the company's decision makers. I weighed each potential feature on customer value, engineering feasibility and revenue potential.
- Led research sessions with employees, managers and HR partners of our pilot customers. I synthesized my findings into common themes which I then used to set the product's direction.
- Shipped Fount AI a year later. HR leaders now had the data but spent weeks finding the right fixes. Fount AI suggests the best fixes based on ROI and supporting data. Friction resolution time dropped to 1.4 weeks from 6.2 weeks.

Product Designer**Jan. 2022 - Dec. 2022**

Macrometa

Remote

A cloud platform for developers building fast global apps and APIs.

- Owned onboarding and activation for the cloud platform and significantly reduced the time to value for new customers which dropped support tickets by 55% within months.
- Interviewed developers of various experience levels and a common theme was having help beyond the first visit. So I built guidance into the product which improved customer retention by 54%.
- I worked with our Head of Design to bring the platform into one consistent design system, which improved customer trust and supported the work I had done on onboarding.

Product Designer**July 2021 - Dec. 2021**

Emtech

Remote

A fintech company providing the infrastructure for countries to adopt central digital banking.

- Took Emtech's CBDC solution from concept to MVP. Worked in fast iteration cycles closely with the founder and other stakeholders.
- I designed for trust and regulatory compliance by keeping complex financial flows intuitive and regulatory boundaries clear.
- The MVP solution I worked on contributed to the \$4M seed round raise and served as the foundation for their design direction.

Product Designer**Jan. 2020 - June 2021**

Freelance

Remote

Where I built the foundations I still work from - Research, Strategy, Ideation, UX thinking, prototyping and a strong visual design language.

- Monipay: Worked on Monipay's B2B payment solution used by 800+ merchants in Africa to manage their business payments.
- Yahshud: Designed a management platform for Yahshud's ethical real estate financing business providing them with the solution they needed to efficiently manage their business operations and focus on other aspects of their business.

EDUCATION

BSc Computer Science, Covenant University | Ota, Nigeria

August 2019
