Olaide Arike Kaffo

Senior Product Designer

Lagos, Nigeria (UTC+1, remote) | +2348120453828 | olaidearikekaffo@gmail.com | olaide.design | LinkedIn

SUMMARY

Senior product designer with 6+ years across B2B SaaS, developer tools, fintech and AI products, designing for enterprise teams and individual customers alike. I lead products from idea to final delivery. I start with the people who have the problem, find the cause, and simplify how the product works, then bring consumer-grade craft to responsive screens that feel simple on any device. At Strategyzer, I design and build in code with Claude on a design system I rebuilt as a Claude skill, and I lead design for sales, marketing and client delivery.

EXPERIENCE

Senior Product Designer | Strategyzer Oct 2025 - Present | Remote

Strategy and innovation software for enterprise teams. The only designer on a product team of four.

- Pushed back on an AI chatbot and built what customers needed. Using 8 customer interviews and a working prototype, I made the case to our CEO and Head of Product for a focused three-question Playbook Recommender. New customers starting a project rose from 57% to 85%, and satisfaction from 68% to 95%.
- Designed the Recommender for trust, with questions in customers' own words, AI at one step only, and an honest answer when nothing fits. Users returning within 30 days rose from about 10% to 40%.
- Removed the bottleneck behind six-figure enterprise programs. I watched program designers work on their own screens and traced their workarounds to four root causes. A full round of changes to a live program went from two days to about 30 minutes.
- Rebuilt FondUI, our design system, as a Claude skill with tokens that match our engineers' code. I design and build front ends with Claude, and engineers connect them with no handoff, so our team works at least twice as fast.
- Led design for sales, marketing and client delivery through Claude skills built on our design system. A sales deck went from a full day to about 30 minutes, which our Head of Sales called one of his team's largest quality leaps.

Senior Product Designer | Fount Jan 2023 - Sep 2025 | Remote

Enterprise SaaS that turns employee feedback into decisions. The only designer, leading two products end to end.

- Took Fount from idea to launch in three months, replacing yearly employee surveys with short pulse surveys and a journey view of what to fix first. It earned $3M+ in its first year, with 81% average weekly participation.
- Led two rounds of remote research. First, 24 contextual interviews at INGKA, 8 at other organisations and 16 HR and leadership sessions, which revealed four root causes that set the product's direction. Then 43 HR leaders, managers and executives for Fount AI.
- Designed Fount AI to answer HR's questions in plain words and rank fixes by return, with sources. Tested with 47 people, including testers from T-Mobile, UBS, UHG and Discover, it cut issue resolution time from 6.2 to 1.4 weeks.
- Designed the employee experience with the care of a consumer app, with a bold, colourful style and surveys that are quick to answer on any device, testing alternative versions with users. 91% of employees used Fount monthly, and 74% of managers checked their dashboard every week.
- Ran first-release prioritisation with the company's decision makers, and set the team's Figma standards for fully specified components.

Product Designer | Macrometa Jan 2022 - Dec 2022 | Remote

A cloud platform for developers building fast, global apps and APIs.

- Led developer onboarding with a guided welcome, templates and sample data, so no one starts from a blank page. Template adoption hit 85%, and support tickets fell 55%.
- Researched through support tickets, interviews, a developer survey and competitor analysis, then built guidance into the product. Customer retention rose 54%.
- Cut sign-up to the essentials, with GitHub or Google sign-in and no credit card. Signing up became 73% faster.
- Refreshed the UI with our Head of Design, grouping the navigation and making tabs and menus consistent.

Product Designer | Emtech Jul 2021 - Dec 2021 | Remote

A fintech company helping central banks adopt digital currencies.

- Designed the central bank digital currency (CBDC) MVP from concept to launch, working closely with the founder.
- Redesigned how requests get approved. At a central bank, every decision needs sign-off from senior staff, and a wrong approval triggers extra regulatory checks. Each request showed approvers the reason behind it, where it stood in the approval process and, if it was turned down, why.
- The MVP contributed to a seed round of about $4 million.

Product Designer | Freelance Jan 2020 - Jun 2021 | Remote

Early work that built my foundations in research, strategy, prototyping and visual design.

- **Monipay:** Designed for a B2B payments product that helped 800+ merchants and business owners in Africa take payments online.
- **Yahshud:** Designed a management platform for a non-interest real estate financing business, with tools to manage leads and let people book time with the team.

SKILLS

Product design: End-to-end product design, interaction design, visual design, information architecture, complex B2B workflows, dashboards, responsive web and mobile design

Research: Interviews, contextual inquiry, surveys, usability testing, journey mapping, competitor research, analytics

AI: AI product design, AI transparency and trust, designing and building in code with Claude, Claude skills, Figma MCP

Design systems: Component libraries, design tokens and variables, usage rules, WCAG accessibility

Strategy and collaboration: Product strategy, prioritisation, success metrics, partnership with product and engineering, design leadership across teams, remote and async work

Tools: Figma, FigJam, Claude, Claude Code, Loom

WRITING

"Prototypes That Ship" and "The Only Designer in the Room", articles on designing in code with AI and scaling design across a company (olaide.design)

EDUCATION

BSc Computer Science, Covenant University, Ota, Nigeria July 2019
